

Preserve & Enjoy Your Important Events for Many Years!

There was a time when many of us used super 8mm film or VHS tapes to record the special events of our lives. Today, however, the equipment needed to view this material is not easily obtained, leaving a large quantity of this important recorded material inaccessible. Think of that favorite movie as showing happy times with family and friends. I will transfer your film-recorded memories onto DVDs, although there are limitations to what will be transferred. Anything that holds copyright protection or pornographic content will not be transferred. The better the 8 mm film, the better it transfers to disk.

I have used the Video Insite staff for a number of years to record and duplicate a two-day Successful Living Seminar. They were ready on time for each session, their equipment accomplished the capture and duplicating flawlessly, the audio sets were completed before the seminars ended, and their work was accomplished in a professional manner. I heartily recommend their company for your audio or video requirements.
